## Research of Horizon 2020 applicants or international research partners from industry and academia in the optical sector

*An Austrian lighting company needs to develop its knowledge and technology in the lighting and optical sectors, thanks to a Horizon 2020-funded project.*

### Description

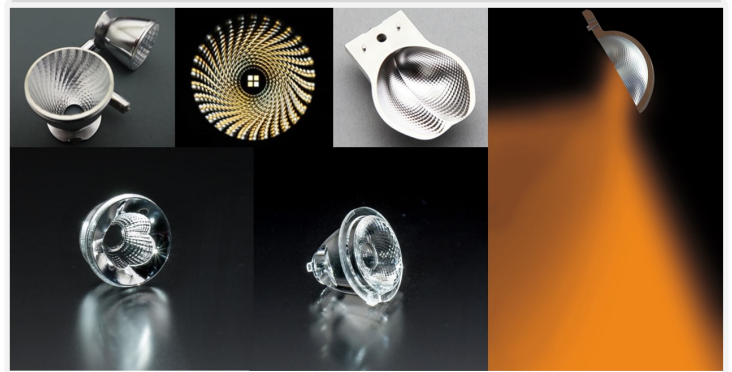

The Austrian company is well known for its functional and scientific based lighting design projects, for its studies on visual perception on light and health, and for the development of new lighting solutions and technologies. In the last years, the company has used its extensive knowledge in optical design to develop its own series of patented components using freeform faceted technology.

The Austrian company, still in the concept stage, aims at joining a research or technical cooperation to improve the knowledge and technology in the following areas: light and health, daylighting and building physics, optical design and luminaire development, and finally LED applications.

### Partner sought

The Austrian company is looking for : industry or academia with research or technical cooperation agreement to join/ lead a consortium for a Horizon 2020 project in the fields mentioned above. The company is open to start further non EU-funded research or technical cooperation with international partners too.

**Program, Call :**  
**Horizon 2020**  
**Theme :**  
**Optics**  
**Deadline for expressions of interest :**  
**17 February 2018**
