URGENT : Clinical research institute sought for Eurostars project

A German company specialized in measurement and sensors is looking for a clinical research center to join a Eurostars project.

mardi 14 novembre 2017— P22

Program, Call :

Eurostars

Theme :

Health

Deadline for expressions of interest :

28 November 2017

Description

The project aims at developing a standardized method (and prototype) for non-invasive blood pressure measurement instruments in order to monitor patient data in a systematic and more reliable manner.

Work packages of the project are:

- 1) A calibration method shall be compiled that takes all medical and technical requirements into consideration. (task of profile holder)
- 2) Based on that a prototype will be developed as well as a corresponding software that needs to be integrated. (task of profile holder and software developer)
- 3) A measurement test-site needs to be developed in which adequate measurements can be performed according to specific standards. (primary task of clinical research center)

To complete those crucial tasks an interdisciplinary team consisting of measurement technicians, software developers and doctors is required.

The consortium is still lacking a clinical/medical center that is well experienced with cardiovascular diseases and blood pressure monitoring.

Partner sought

The Institute should be active in the area of cardiovascular diseases and well experienced in blood pressure monitoring (should have access to medical equipment for blood pressure monitoring). The clinical/medical research center shall develop clinical parameters and provide input with regard to patients needs. This will be the basis for developing technical parameters for the prototype.

Further Tasks:

- validation of various, non-invasive blood pressure methods with regard to calibration
- development of a reference method out of medical perspective
- participation in laboratory testing of the developed prototype
