Development of future solutions based on the Once-Only Principle (OOP)

A German IT company is participating in a Horizon 2020-funded research project, consisting in expert discussions and the development of solutions based on the OOP.

Description

Many public administrations require their citizens to provide information every time they need administrative services. The OOP aims to eliminate this repetitive request in making sure that public administration can re-use citizens' data, in a transparent and secure way. Citizens gain better control over their information and public administration can work faster and more efficiently.

The Horizon 2020 - funded project, in which is participating the German IT company, aims to bring together public administrations, researchers and interested public to transfer and share knowledge, and develop future solutions based on the OOP.

Partner sought

The German IT company is looking for : public administrations and IT service companies interested in being involved in the Stakeholder Community of the project, to participate in the expert discussion on the OOP (sharing of experiences/expertise/ best practices examples)

Program, Call :

Horizon 2020

Theme :

E-Government / Data processing
