## Development of a hydro-generator with an innovative horizontal reaction turbine

*A Spanish company aims to develop, manufacture and commercialize a new generation hydro-generator with efficient and innovative horizontal reaction turbine.*

### Description

A Spanish company, active in the electricity generation and renewable energy sectors, aims to develop a new hydro-generator with efficient and innovative horizontal reaction turbine, with the capacity, thanks to its design, to work in rivers of low and high speeds.

Using the hydrodynamic phenomena, the turbine is intended to be compact, easy to install, scalable and efficient, and therefore economic and affordable for the final consumer. Make rise a high commercial and industrial interest is expected. The Spanish company has already a patented turbine.

### Partner sought

The Spanish company is looking for : technological partners working in the development of electric generators and turbines or in manufacturing, machining and moulding. They are expected to help the development of electrical generators according to technical specifications and manufacture of complex geometry lines.
